

Rail Replacement

Rail Replacement

TECHNOLOGY

- High-technology for large rail replacement sites (> 2500 m track)
- Integrated unloading and exchange of rails
- Loading and disposal of old rails
- Exchange of long welded rails up to 360 m
- To be combined with mobile flash-butt welding machine to manufacture continuously welded rails

PERFORMANCE

- Operating speed:
 1. Unloading and exchanging:
360 – 600 m track/hour
 2. Loading of old rails:
500 – 750 m track/hour
- Min. radius: 350 m

ADVANTAGES

- Rapid work progress through
 - high operating speed
 - no need for extra unloading of rails
- Cost-effectiveness
- Unloading and exchange of rails in one step, followed by loading of used rails
- Integrated manufacture of continuous track
- Approved by Deutsche Bahn AG

SLAB TRACK

- Unique solution for exchanging rails on slab tracks
- Preservation of the concrete foundation through permanent rail guidance
- Integration of rail disposal
